FatRat

FatRat is...

an open source download manager for Linux written in C++ and built on top of the Qt 4 library (Git version uses Qt 5). It is rich in features and is continuously extended.

Features (of the Git* version):

- Segmented* HTTP(S)/FTP downloads
- FTP uploads
- Support for SOCKS5 and HTTP proxies
- RSS feed support + special functions for TV shows and podcasts
- BitTorrent support (including torrent creating, DHT, UPnP, encryption etc.)
- Torrent search on major torrent sites incl. The Pirate Bay, EZTV, BitTorrentMonster...
- MD4/MD5/SHA1 hash computing
- Remote control via Jabber (!)
- Remote control via an AJAX* web interface
- Subtitle search
- RAR/ZIP file unpacker
- Scheduler
- Clipboard monitor

And even more! Interested in what is coming next? See the TODO.
